

Coating Thickness Adjustment Systems

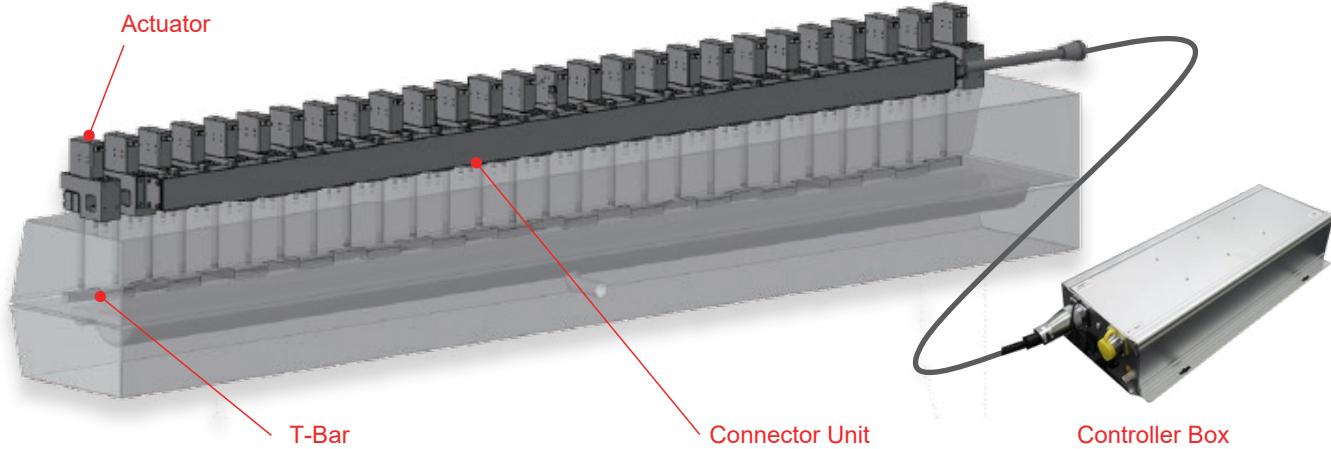

WER-035E-2512

T-Bar DIE

T-Bar electric

Features

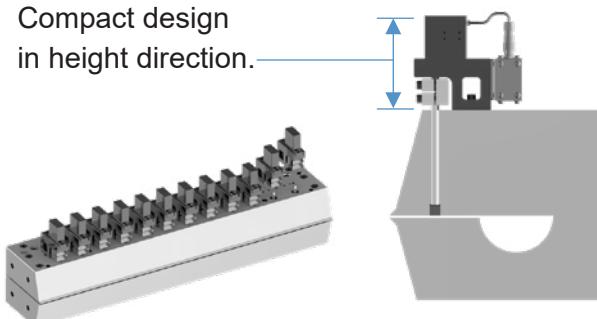

- Flow rate can be adjusted by the coating thickness adjustment system by extruding the T-Bar.
- Numerical control of T-Bar adjustment amount by PC is possible.
- T-Bar reference point can be set.
⇒ The reference point of the T-Bar is adjusted when the actuator is turned on.
- Compact design with small actuator unit.
⇒ Bar width Minimum size 12.5 mm. (Standard width 50 mm)

1. Direct Motion System

<Features>

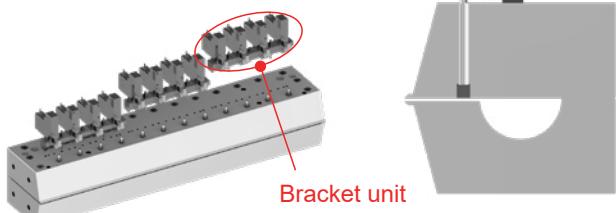

Compact design
in height direction.

2. Swing Arm System

<Features>

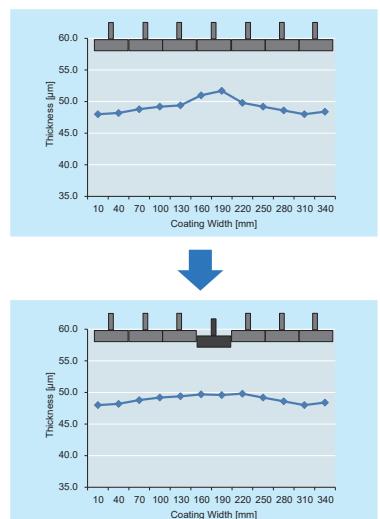

Bracket unit reduces
assembly and disassembly time.

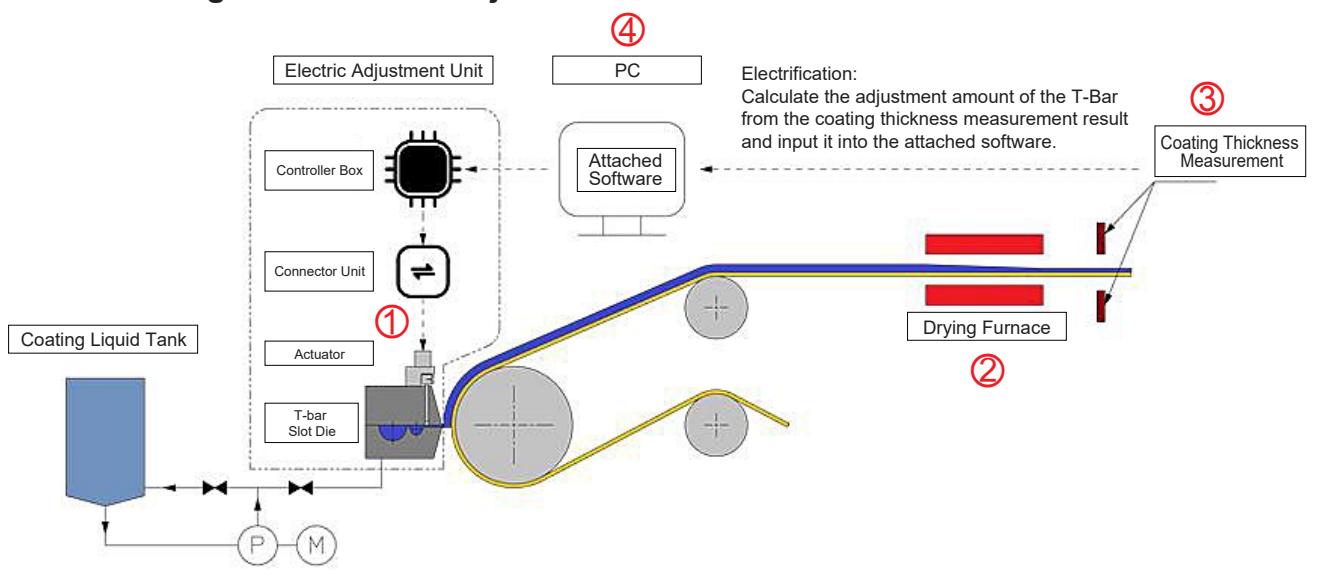

Coating thickness adjustment method

- ① Coated with T-bar slot die
- ② Dry
- ③ Coating thickness measurement and data collection
- ④ Adjust the T-Bar based on the thickness result

※ Repeat steps ① through ④ to adjust the coating thickness.

Schematic diagram of electric adjustment unit

The electric adjustment unit includes the following:

- Actuator
- Controller Box
- Connector Unit
- Software (T-Bar movement adjustment only)

* Separate control software is required to automatically adjust the coating thickness.

 MITSUBISHI MATERIALS HARDMETAL CORPORATION

Tokyo Office Marunouchi Nijubashi Building 22F, 3-2-3, Marunouchi,
Chiyoda-ku, Tokyo 100-0005, Japan
